Professional Profile

Software developer with over two decades of IT experience and a recently earned computer engineering degree with distinction. Focused on designing scalable, highly available, and secure C# and .NET Core-based web applications, robust REST APIs, and database integrations (SQL, NoSQL). Well-versed in MVC/N-tier architectures and transitioning towards microservices. A detail-oriented professional committed to agile teamwork, secure coding principles, and delivering modern enterprise solutions for business-critical environments.

Education

Óbuda University (OE-NIK)
BSc in Computer Engineering
Degree with distinction
Big Data and BI Specialization
(2022 – 2026)

Kalmár László Secondary School of Computer Science
Programmer (OKJ 54 4641 04)
Degree with distinction

Experience

Software Engineer (Self-Employed) | 2023 – Present
Custom software solutions for B2B clients, including public administration and healthcare sectors, focusing on highly available and business-critical systems. Development and maintenance of complex Orchard CMS (.NET) projects with Lombiq Technologies Kft. Designing custom business logic ensuring data security, clean code, and reliable API integrations. Building API endpoints (generation of JSON data and processing of external data) using EF CORE and MS SQL. Performed frontend tasks using jQuery and DOM manipulation. Issue tracking and management via Jira; version control, PRs, code reviews, and pair programming conducted on GitHub and Teams.

IT Systems Engineer / Developer (M-Chip 3000 Bt.) | 2006 – 2023
Full IT support for contracted partners (mayor's offices and SMEs), development of custom desktop and database management applications (e.g. format conversions between HREG and OTP Electra), maintenance and bug fixing of existing systems.

IT Specialist (Dzsébri Szoft Bt.) | 2001 – 2006
Networking, hardware and software maintenance.

Language skills

English: Professional working proficiency
Hungarian: Native

Awards

TCS CodeVita Season 12 (2024-2025): Semi-final placement. One of the 8 competitors from the European region to qualify for the international competition.

National IT Competition (2022, 2024): 13th place in the "Language-independent programming and algorithmization" and 7th place in the C++ category (and placed in the top 10% in other categories).

Skills

Continuous learning
Independent work
Analytical thinking
Stress tolerance
Clean Code
Agile mindset
Mentoring
Openness to new technologies

Technology Competencies

Backends: C#, .NET Core (.NET 5-8), ASP.NET Core Web API, Entity Framework Core, Dapper, SQL.

Architecture & Integration: Microservices and N-tier architectures, Secure Development / Secure Coding practices, RESTful API design.

Client-side & Mobile: HTML, CSS (SCSS), jQuery, AJAX, .NET MAUI (XAML, MVVM). Ongoing Studies: Angular

Other knowledge: Big Data technologies (Apache Spark, PySpark, Databricks), Data warehouse design (Star schema), SSIS, Power BI, BigQuery, Looker, Unit testing basics, Java web basics.

DevOps & Cloud: Google Cloud Platform (GCP - earned Cloud Skills Boost professional badges), Docker, GitHub.

AI & Productivity: GitHub Copilot, Cursor IDE.

References

My portfolio website, available at https://zoltanmajnek.github.io, features detailed descriptions of several projects, including the following highlights:

RunInto: Design and development of a .NET MAUI mobile application, with a hybrid NoSQL database (Neo4J + Firebase Realtime), FCM, GPS management, MVVM architecture.

Healthcare contact system: Long-term development and maintenance of a .NET Orchard CMS (a solution consisting of more than 100 projects), with Lombiq Kft. For example, one of my key contributions was the creation of a Temporary Profile Access module.

N-Tier API & SignalR Showcase: Developed a multi-tier ASP.NET Core architecture utilizing EF Core, the Repository pattern, and RESTful endpoints. Implemented real-time SignalR communication and seamlessly integrated it with multiple client applications, including a JavaScript web frontend. The source code and project details are available on my GitHub repository.

Oracle SQL & Neo4j Database Pipeline: SQL database design, cleaning and importing large raw source data, query optimizations, transforming and exporting data to a graph database.

World Cup Prediction App: ASP.NET Core 8 secure intranet web application for public administration (MEKH). Featuring MS SQL database integration and hosted on an IIS web server.

My GitHub account can be found at https://github.com/zoltanmajnek (the link to my previously active account is included in my profile).
